...:     price=1299.99
...: )
Out[6]: <Product: Ноутбук>

In [7]:
```

DjangoProject > catalog > admin.py

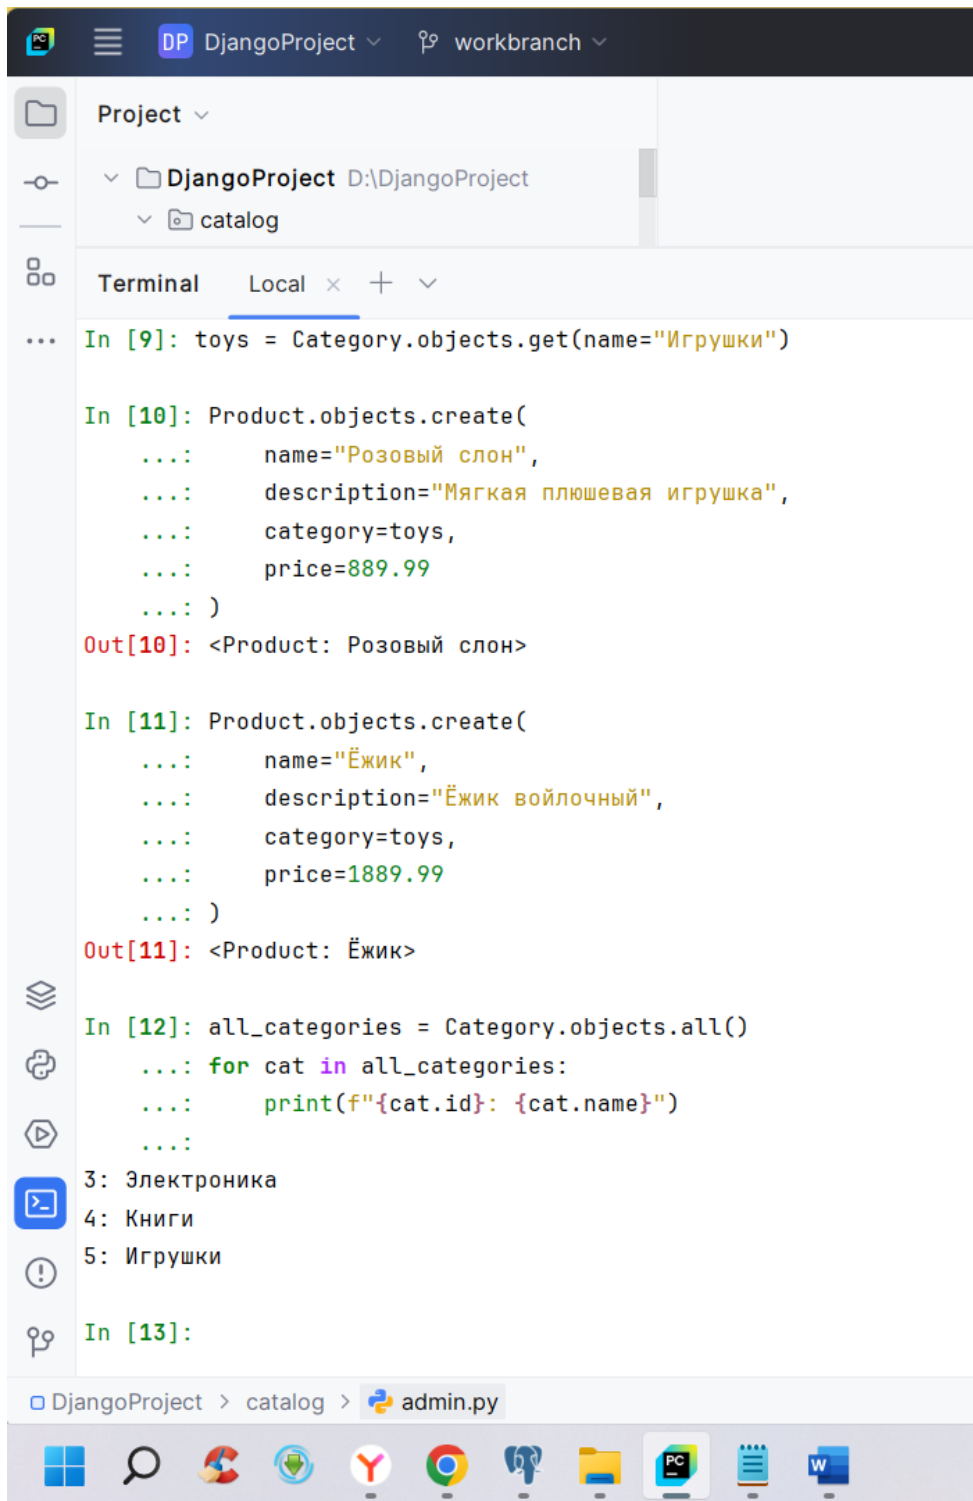

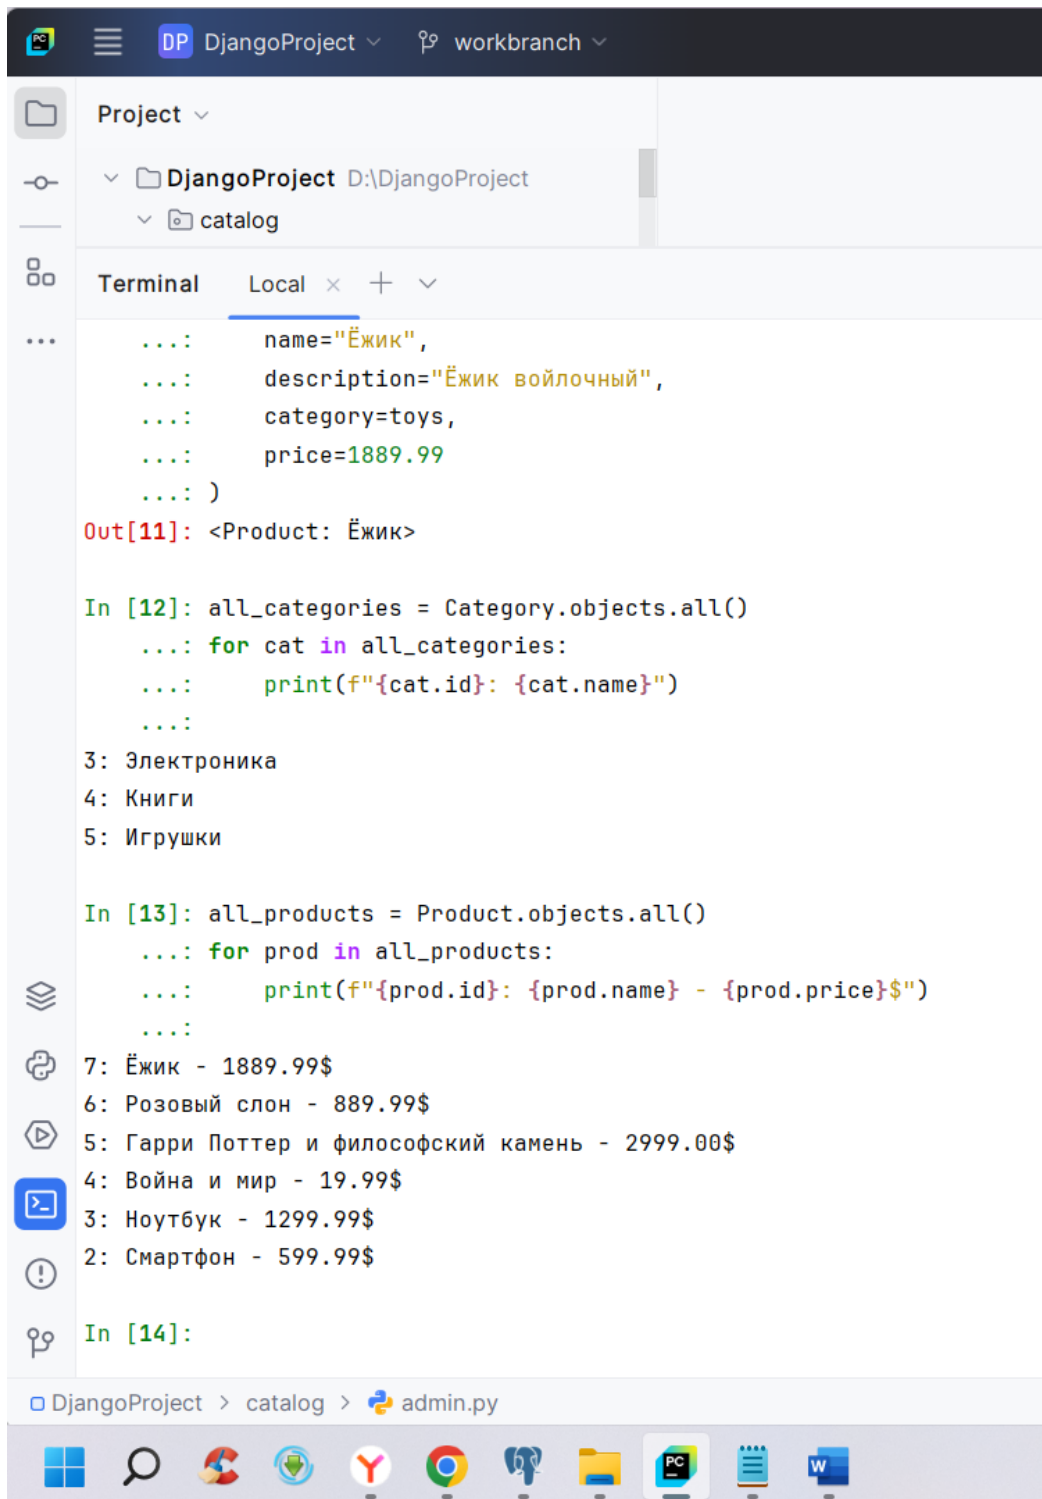

The screenshot shows a Jupyter Notebook interface within Visual Studio Code. The top bar indicates the project is 'DjangoProject' on the 'workbranch'. The left sidebar shows the file explorer with 'DjangoProject' and 'catalog' folders. The main area displays the notebook content, which includes three code cells for creating products and one empty cell. The first cell creates a product named 'Гарри Поттер и философский камень' in the 'books' category. The second cell creates a product named 'Розовый слон' in the 'toys' category. The third cell creates a product named 'Ёжик' in the 'toys' category. The output of each cell shows the created product object. The bottom status bar shows the current file is 'admin.py' in the 'catalog' folder.
